

MBE Growth and Thermo-/Magneto-Transport Properties of Ternary (Bi,Sb)₂(Te,Se)₃ Films with High Mobility

Supplemental Document

Patrick J. Taylor^{1*}, Hang Chi^{1,2*}, Brandi Wooten⁵, Joseph P. Heremans^{3,4,5}, Harry Hier¹, Owen Vail¹, and Jagadeesh S. Moodera^{1,6*}

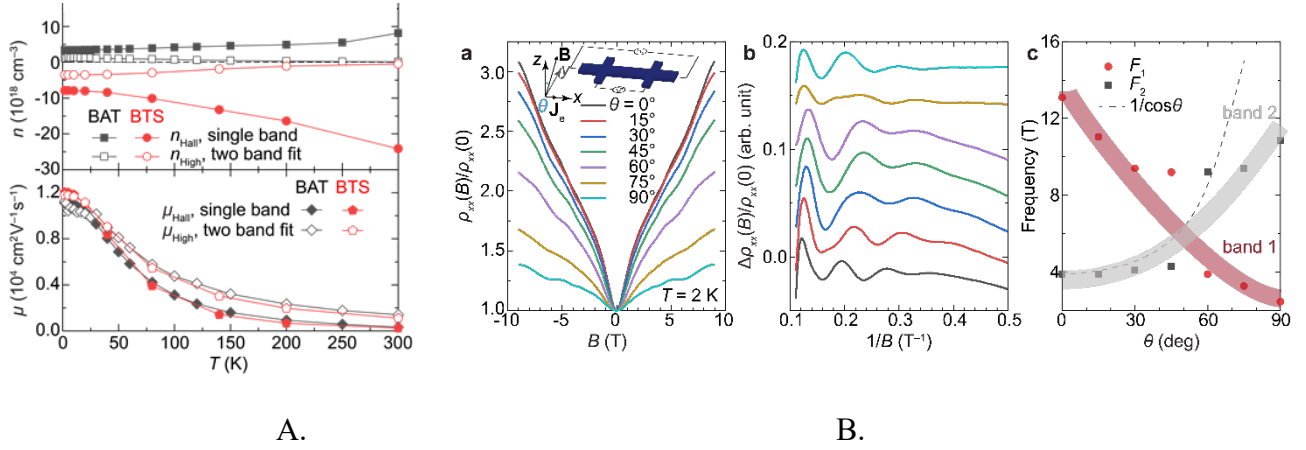

Figure 1 | **A.** Hall mobility and carrier density **B.** Angular dependence of the quantum oscillation. The fast Fourier transform frequency analysis of the SdH spectra, revealing contributions from two 3D bulk pockets. The dashed line of $1/\cos\theta$ indicates that the secondary band 2 is not of 2D origin.
